Subject: Key Learnings During Genesis Journey

Hi Mudassar,

Hope you and your family are safe during these pandemic times.

This is to bring to your notice the key learnings I was able to absorb during the Genesis Program. My Genesis journey started on mid-September and currently I am undergoing shadow project which is the last phase of the Genesis program. I am currently working under Consumer Electronics (CES) Domain under Industrial and Consumer Products (ICP) BU. The training focused on enriching the soft skills as well as our technical knowledge.

Genesis Training was divided into categories such as Foundation, Specialization and Shadow project. The first two phases of the training were purely classroom based. The technical courses during these were focused on topics related to software such as C++ , Java , Basics of Android , Android Framework and Web Development. Also, there were courses on LTE and 5G which is related to telecommunication domain. For all the courses, a practical implementation was done based on our learnings. This helped me a lot in the practical implementation of concepts I learned during each course. Apart from the technical courses there were training on soft skills which improved my professional skills such as communication, time management, team player etc. Some of the professional training courses I undergone are Prevention of Sexual Harassment (POSH), Campus to Corporate, Business etiquette, Flexibility at work etc. These trainings helped me to understand the different etiquette to be followed in a corporate environment.

Currently I am working on my shadow project which is 'Pocket Signal Generator' based on Android Application under the guidance of Kalpesh and Roshan. The learnings I got during the classroom training helping me a lot in my current work. Since I completed my Btech in Electronics and Biomedical Engineering , initially I faced some challenges because the courses were purely software based and I was new to these topics. So, to attain the same I need to work more on building my coding skills and hopefully I am doing a great.

This journey helped me a lot in improving myself personally and technically. Also, this program played a huge role in bridging the gap between Student world and a Professional world.

Regards,
