Subject:Key learnings of Genesis training program

Hi Mudassar,

Hope you're doing well in this pandemic time.

This is to inform you about my journey during the Genesis training program. I have started my Genesis program on 14th of September at Bangalore. First, we were separated into two different BUs which are Medical and ICP (Industrial and Consumer Products). Currently I am working under Consumer Electronics Domain (CES) in ICP BU and now I am in final phase of this program which is Shadow/Live project. In Genesis program there were Technical Course and Professional Courses which helped me to improve my skills in both the aspects.

This training program is divided into three courses Foundation course, Specialization course and Shadow project/Live project which depends on the experience of individual trainees. Since I completed my six months internship here, so I have deployed directly into a live project instead of shadow project. For ICP BU, foundation courses include C++, Linux, Java and SDLC. Whereas Specialization courses includes Android Basics, Android Frameworks, Web Development, LTE and 5G. For each course there was one pre assessment and one post assessment to check our progress apart from assessments individual and group projects were also there for some of the courses. Through these courses I have gained in-depth knowledge in those areas. Apart from these courses some Professional courses were there which are Prevention of Sexual Harassment (POSH), Campus to Corporate, Business etiquette , Flexibility at work etc.through which I have acquired knowledge about corporate world.

Currently I am working under Kundan on Android Telephony. I have been given materials to work on to improve my knowledge which I gained during the last two months of training. Basics of Android and Android Frameworks courses has helped me a lot in my current work. Since I am from Electronics and Telecommunication background it was a bit difficult for me to complete those software courses except from LTE and 5G. Since I am currently working on Android Telephony project, so I am reading more material related to that topic to thoro with the concepts in that topics and also practicing the software part.

This journey helped me a lot in improving myself personally and technically.

Regards,
